

G-Scan 2

Advanced Diagnostics

G-SCAN 2

Innovation to Multi-Function Diagnostics
with optional Measurement Kit

EZDS G-SCAN 2

Overview

The G-Scan 2 has taken its place as the market leader when it comes to vehicle coverage and advanced functions needed to diagnose and program the systems on late model vehicles. Having a pedigree from the OEM and being made in Korea its quality and capability stand out from its competitors.

It is without doubt the best all rounder available and with its ability to handle both 12v and 24v systems it gives you the additional option of adding a wider range of vehicles that you can diagnose.

With the optional measurement kit the G-Scan 2 becomes a complete Diagnostic solution as it not only offers full diagnostic functions but testing capability as well. Even if you have a scanner this is the next step for you going forward!

Features

- OEM Level Capabilities and Standards
